

**How to:**  
**Make an image map**

**Created by:**

Katie Brennan and Suzanne Thompson

**Date:**

June 8 1999

**General concept:**

To take an image and link specific areas of that image to different pages.

**Specific steps:**

1. Import a picture file in to Image Mapper.
2. Outline areas that will be your links.
3. Give the outlined area an address or file to link to.
4. Go To generate Image Map
5. Compile image map, as a client side-HTML image map
6. Generate code
7. Save code
8. Take code (copy and paste)and place into your HTML script.
9. Save Image Map ( in case you ever have to change it)

**Software required:**

**Name;** Image Mapper  
**Version;** 3.0  
**Platform;** Mac  
**Status;** Shareware  
**Source;** Green Monster Software
